"use strict"

function declaration

```
let name1 = "hello"  
console.log(name1);
```

```
let student = {  
  name: "Varad",  
  printName: function () {  
    console.log("Hii,", this.name);  
  }  
}
```

```
student.printName()
```

role

class

here == student

arrow function

↘ mai kudh ka thep
nhi hota

→ lexical

Get name

```
let product = {  
  name : "Iphone",  
  printName : function () {  
    const print = () => {  
      console.log(this.name);  
    }  
    print()  
  }  
}  
product.printName()
```

$this == product$

```
let nestedFunction = {  
  name: "Something",  
  fun: function () {  
    let name = "something"  
    let product = {  
      name: "Iphone",  
      printName: function () {  
        const print = () => {  
          console.log(this.name);  
        }  
        print()  
      }  
    }  
    product.printName()  
  }  
}  
  
nestedFunction.fun()
```

nested function == this

```

let nestedFunction = {
  name: "Something",
  fun: function () {
    let product = {
      printName: function () {
        const print = () => {
          console.log(this.name);
        }
        print()
      }
    }
    product.printName()
  }
}

```

product

undif

this == product

nestedFunction.fun()

```

let nestedFunction = {
  name: "Something",
  fun: function () {
    let product = {
      name: "iphone",
      printName: () => {
        console.log(this.name);
      }
    }
    product.printName()
  }
}

```

nestedfun == this

X

nestedFunction.fun()

Arrow function $\rightarrow$ comes from outside

normal function $\rightarrow$ depends on how it called

this $\neq$ variable

Coercion

type conversion

implicit
(^{JS} kind of)

explicit
(manually)

operator $\rightarrow +$ $\rightarrow$ अगर कोई भी एक operand
string हुआ तो
string concatenation होगा

Is remaining operands को
भी string में convert
कर देगी

$/, *, -$ $\rightarrow$ Is sare operands को
number में convert करेगी
(अगर कोई number नहीं है तो)
and output देगी.

false

false, 0, "", undefined, null, NaN

empty string

[]

Truthy

{ }

```
ole.log(!!!!"");
```
