frontend

How to master JS

Bug → fix

fullstack
ai ml
d+b
(Idea
Session storage
↳ per tab
Todo
original
{
}
JSON.stringify(a)
value
string
'{ }'
JSON.parse( )
'{ }'

let num=1

num='nishant'

let num:Number=1

num='str'

Promise

{pending} → initial state

final state → settled (rejected)
+
fulfilled

JS

Typescript

map → higher order function

Array

input [1, 2, 3, 4] → 4

output [6, 7, 8, 9] → 4

input → n length

return output → n length

Coercion

{ convert krna

num = 1

String(1) → '1'

explicit

Implicit

let = '1' + 1 → 1

= 11

= 5 + 6 + '7' + 8

= 11 + '7' + 8

= '117' + 8

= '1178'

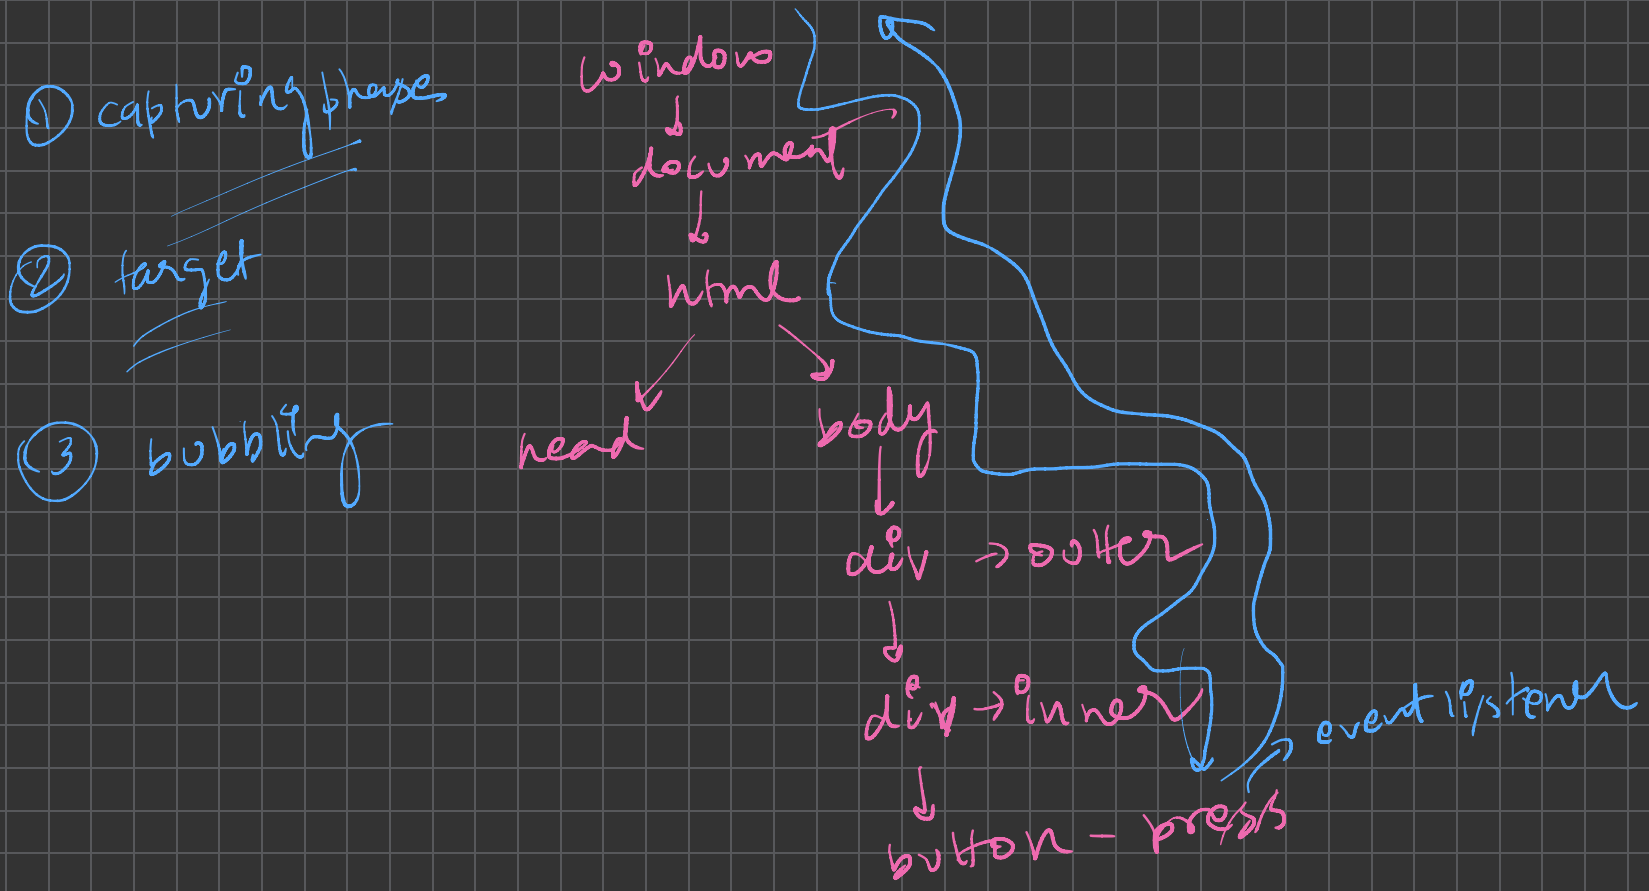

* / %

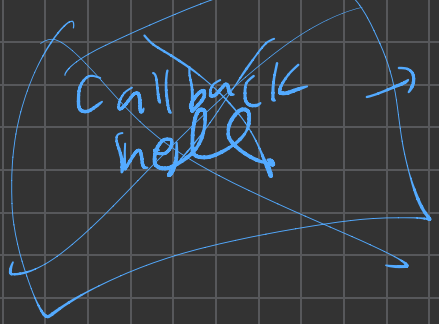

= '1' * 1

= 1

= '3' x 5

= 15

1. capturing phase
2. target
3. bubbling
